

## Monthly Air Pollution Control Program Summary Report

### Concerns Received or Investigated Between October 16, 2022 and December 15, 2022

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegation as it was made. Those statements of allegations do not necessarily reflect the legal

#### Concerns Received During Report Period

	Total
<b>Total</b>	143
Asbestos	16
Fugitive Particulate Matter	12
Hazardous Air Pollutant Release	5
Odor	48
Open Burning	39
Other	20
Particulates	3

#### Concerns Investigated During Report Period

	Total
<b>Total</b>	136
<b>Concerns Received Before Report Period</b>	6
<b>Concerns Received During Report Period</b>	130

Number of Notices of Violation Issued: 0

Number of Referral Notices of Violation Issued: 2

Number of Letters of Warning Issued: 17

*Please note, the information provided in this report reflects all concerns investigated during the reporting period, regardless of the date on which the original concern was received.*

## Monthly Air Pollution Control Program Detail Report

### Concerns Received or Investigated Between October 16, 2022 and December 15, 2022

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
KCRO	10/20/2022	10/3/2022	HALO Village Project	Kansas City Jackson	Fugitive Particulate Matter	DS		

**Monthly Air Pollution Control Program Detail Report**  
**Concerns Investigated Between**  
**October 16, 2022 and December 15, 2022**

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51397    **Concern Info** Construction is underway on three acres west of us. During excavation and grading of the site, the only road in and out of the site is a narrow city street which never was cleaned of mud and dust from the site. Now that footings are going in, the machinery and concrete trucks are kicking up dust again. My house mate has been found to have two lung infections which came about when the site demolition started.

DNR delegates all its responsibilities to the City of Kansas City Health Department. This Air Quality issue has been reported to the Director, however, for whatever reason, she is unable to investigate or enforce. Our request:

1. Please investigate the HALO Village project, 5928 East 52nd Terrace KC Mo. 64129. Building permits numbered CPBC 2022-00971, CPBC 2022-00970, CPBC 2002-00972.
2. Please determine if there is any evidence that the City Inspections Department followed the law and State DNR regulations in the inspection of erosion control and air quality during the initial clearing of the site and grading.
3. Please determine if the Permittee has taken steps to meet or exceed the Air Quality standards for the Building Permits issued.
4. Please report back to us when you start your inquiry; who in your office is performing it; and what responses you receive from the City, the Permittee, and each of the subcontractors.
5. Should there be evidence that the Health Department has been told to not enforce, when there is evidence of unlawful acts by it as regulator, what are the steps for having a subrecipient of DNR responsibilities be suspended ?

We have evidence taken during the periods in question (since July 2022). Do we need to fill out a form? Who should receive the evidence?

Thank you! We appreciate what you do, and over the past 40 some years we have developed a high regard for our Health Department. They are restricted politically from taking any responsibilities delegated to them by the DNR.

--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Comments** ?No violations were found during the investigation.

KCRO	10/19/2022	10/11/2022	Buildex, LLC	Dearborn Platte	Fugitive Particulate Matter	DS
------	------------	------------	--------------	--------------------	-----------------------------	----

**Concern No.** 51396    **Concern Info** The Buildex plant outside Dearborn, MO seems to be struggling lately with dust. I realize we are in a drought but their dust is silica and very dangerous for human health. The tall structure at the center of the operation is having difficulty it seems - dust sometimes just rolls out of it. They also aren't keeping the piles watered as well as they have in the past. You may not catch this when it is happening - I drove by early this morning and dust was flowing across the property lines but early this afternoon it was better. They also frequently release dust out of the tall structure late at night. You might give them a jingle - thanks

**Comments** At the time of investigation no violations were observed. ?Further investigation by Buildex showed that the night crew was not watering the roads. Buildex is training employees to address the issue.

KCRO	10/18/2022	10/18/2022	Platte County Parks & Recreation	Weston Platte	Fugitive Particulate Matter	MC

**October 16, 2022 and December 15, 2022**

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51463    **Concern Info** Caller stated that soybean harvesting was occurring yesterday and the leased land (Platte County Parks and Rec) to the north of him was being harvested and was so bad that he could not leave his house. Caller reached out to various groups including the Platte County Park and Rec to voice his concern, but felt like he was not being heard. He just wants to ensure this does not happen in the future and that harvesting not occur when conditions are going to severely impact residents near by.

**Comments** I emailed the concerned party. I informed him that the operation was exempt from the Department's air regulations, but I would contact Parks and Rec from an advisory position and recommend they consider the impact to neighbors when scheduling harvesting. I also advised him to reach out to the Platte County Presiding Commissioner, Ron Schieber, if he believed Parks and Rec was not responsive to his concerns.

I emailed Platte County Parks and Rec to inform them of the concern. I let them know some of the health impacts of particulate pollution and asked them, when practical, to please consider suspending harvesting activities when conditions, such as high winds, will cause off-site impacts.

KCRO	10/21/2022	10/20/2022	Ideker Mosby Asphalt Plant	Mosby Clay	Fugitive Particulate Matter	JS
------	------------	------------	----------------------------	---------------	-----------------------------	----

## Monthly Air Pollution Control Program Detail Report

### Concerns Investigated Between

### October 16, 2022 and December 15, 2022

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51490    **Concern Info** From MERLIN 221020-1541-LDH The National Response Center report states: "CALLER STATED SMOKE IS RELEASING FROM AN ASPHALT COMPANY AND ITS RELEASING INTO THE SURROUNDING AREA." This incident is being referred to the Department's Kansas City Regional Office for further investigation.

**Comments** Mineral filler silo emissions were escaping from the overflow vent, bypassing the bin vent filter and resulting in significantly increased particulate emissions.

Fugitive particulate emissions from the mixing drum were observed beyond the boundary of the facility property.

Emissions, which included particulate matter, were escaping the mixing drum instead of being routed to the dryer drum and subsequently controlled by the baghouse.

A Letter of Warning has been issued to Ideker's Mosby asphalt plant.

KCRO	10/24/2022	10/24/2022	Republic Foods	Lone Jack Johnson	Odor	JH
------	------------	------------	----------------	-------------------	------	----

**Concern No.** 51486    **Concern Info** Horrible odors coming from Republic Foods impacting our fall gathering and hayride on Saturday 10/22. On 10/23, the odor was strong at my home which is 2 miles from Republic Foods. Odor on 800rd was very strong.

**Comments** ?No odor violation at the time of the area visit.

KCRO	10/25/2022	10/24/2022	Tyler Despain & Angelique (Angel) Bryar	St. Joseph Buchanan	Other	JH

## Monthly Air Pollution Control Program Detail Report

### Concerns Investigated Between

### October 16, 2022 and December 15, 2022

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51493    **Concern Info** CP reports that private residence trailer is busting open air conditioners and refrigeration units and discharging freon to the environment. They also cut up old cars on the property.

**Comments** ?At this time, FREON release is regulated by the US EPA.

KCRO	10/26/2022	10/26/2022	William Jewell College	Liberty Clay	Asbestos	JS		
------	------------	------------	------------------------	-----------------	----------	----	--	--

**Concern No.** 51494    **Concern Info** James Hoseth, Facilities Project Manager 816-415-5918; hosethj@william.jewell.edu  
Caller is concerned about renovations in the Curry Hall building of William Jewell College in Liberty. They say they were notified last Wednesday that there would be a carpet removal and some type of "remediation". They worked for 2 days and then they put up plastic sheeting, warning tape, and asbestos warning signs. The caller could not find any asbestos project notifications on our site and is concerned that the workers are not following protocols. The building has a shared HVAC system and it is still running. The caller said the building was built around 1964 and there is known or suspected asbestos in it.

**Comments** The project appears to only involve Category I nonfriable materials. Removal was being done with hand tools, and removal methods did not appear to be rendering the materials friable. No violations were observed during the investigation.

KCRO	10/31/2022	10/31/2022	Gabriel Tower	Kansas City Jackson	Other	JH

## Monthly Air Pollution Control Program Detail Report

### Concerns Investigated Between

### October 16, 2022 and December 15, 2022

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No. 51508      Concern Info**

Gabriel Tower 1600 Jackson avenue Kansas City Missouri 64127. Problem is mold in pretty much all the apartments all the residents including myself have reported its management. I've even requested the document they should have been provided to me where this apartment is habitable and mold free. The document was supposed to be provided to me when I asked for it and it is not.

Few weeks ago instead of fixing the leak or whatever the maintenance guy came in scrape the mold off my ceiling of my bathroom and then left. I was told he's looking for the leak while that's been I've been here since May and they haven't found the leak. My personal belief is they are not looking and don't care to actually fix the leak. They only bandaied it. Also have requested them to come in and spray for roaches and other bugs and mice and nothing's been done. I was speaking to a man who lives in 917 I think his name is Jack he's been here for like 9 years he waited what four months for them to come in and spray for bed bugs. I requested them to come and spray for bugs I don't know four or five six times now nothing's ever done if you're just like the hole in the wall in the bathroom in my shower that is now going on 3 months I asked him to come and fix the tiles were falling off the wall they've done nothing. So my concern is this we have mold issue in this building it's a environmental health issue because most of us are disabled or elderly I myself have COPD I just went through a massive upper respiratory infection due to me breathing in the mold thank you.

**Comments** ?The Department has no regulation on indoor air quality or maintenance

KCRO	11/2/2022	11/2/2022	ZMDR Republic Foods	Lone Jack Johnson	Odor	JH
------	-----------	-----------	---------------------	-------------------	------	----

**Concern No. 51563      Concern Info** Yesterday evening (11/1/2022) there was pretty strong odor at our home 830 NW 1971 Road. Not much wind, just odor settled in on our place. It is apparent it is when they are drilling their waste. It was specified that the odor was between 6:30 to 8 p.m. on November 1, 2022

**Comments** The odor was detected in the air, but it was not detected at the lowest dilution on the Nasal Ranger of 2:1 D/T. Therefore, there was no odor violation.

**Concern No.** 51568    **Concern Info** odors from republic foods are nasty ar my home

**Comments** The odor was detected in the air, but it was not detected at the lowest dilution on the Nasal Ranger of 2:1 D/T. Therefore, there was no odor violation. ???

KCRO	11/4/2022	11/4/2022	ZMDR Republic Foods	Lone Jack Johnson	Odor	JH
------	-----------	-----------	---------------------	-------------------	------	----

**Concern No.** 51589    **Concern Info** The smell from Republic Foods/ZMDR at 1921 NW 50 Highway, Lone Jack, Mo 64070 has been overwhelming today. The DNR has given permission for these people to drill waste in the soil. This waste is going to end up making people sick do you people not care. If your families were subjected to this maybe you would feel different. You know where the smell is coming from you've had a multitude of complaints regarding this

**Comments** The odor was detected in the air, but it was not detected at the lowest dilution on the Nasal Ranger of 2:1 D/T. Therefore, there was no odor violation

KCRO	11/7/2022	11/7/2022	City of Greenwood	Greenwood Jackson	Open Burning	DS
------	-----------	-----------	-------------------	-------------------	--------------	----

**Concern No.** 51591    **Concern Info** The City of Greenwood has consistently had unclean burns on it's 20 acre piece of ground to the east of Allendale Lake Road behind my house for years. As the pictures will show, they routinely mix in plastics, petroleum products and vinyl's in their burns. Pictures provided are of a burn pile on Sept. 22nd and other burns have been much heavier than this. This can also be corroborated by multiple witnesses.

**Comments** ?I did not see any evidence that prohibited items had been burned. The City has been removing prohibited items from the vegetation prior to burning. No violations were found.?

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51705    **Concern Info** The air quality was horrendous again today. The smell of cattle waste being drilled into the surface of the land. You as the DNR gave temporary permission for these people to do this. It's been months for this. The word temporary means to me a time frame or period of time to do something. It appears you are allowing to let this go on with no end in sight. These people signed agreements for certain things and as of yet, they have not did their part to follow through. The blame should also rest with the DNR for allowing them to do this.

**Comments** Odors were detected, but there were below the regulatory limit of 7:1 D/T?

--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51815    **Concern Info** CP stated his neighbor (uncertain of who owns the property) moved in recently to purchase ~1/2 acre next to him and states the new neighbor is essentially operating a landfill at his residence -he is bringing in construction debris from unknown locations and is burning the piles at night. This has been going on for a period of 4-5 months. CP reported this to David Miller, the fire chief (David Miller 816-726-2576). CP stated that David Miller told him they need to catch the person in the act of burning. About a month ago CP took a photo of one of the dump trailers' license plates and said the plate number was: 01K1CE and is a Missouri Plate. CP took some more photos yesterday and will be emailing them to the KCRO@dnr.mo.gov general email to accompany this concern.

**Comments** Violations observed but there have been difficulties identifying the owner of the property. LOW will be sent to listed owner(s) according to Cass County

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
KCRO	12/8/2022	12/6/2022	ATM Holdings I LLC	Belton Cass	Asbestos	JS		

**Concern No.** 51878    **Concern Info** I am concerned that siding containing asbestos was improperly removed from a multi family dwelling in Belton, MO located at 308 E WALNUT, BELTON MO 64012. I am also concerned about lead paint contamination, as my 1 year old granddaughter lives with me. I do not, however, know for sure, as I have little experience in such matters, and I am merely a tenant and have no contact with the property owners.

What I do know is that our building was constructed in the 1930's, had multiple layers of both siding, shingles, and paint removed, and I along with several other tenants, have experienced a lot of respiratory issues during and after the work.

I am aware that the effects of exposure to both asbestos and lead are not typically seen in the short term, but I am not willing to wait 20 years to find out if I or my loved ones have been exposed. Frankly, we tenants were not even told that these major building projects/ repairs were to be done, and therefore had no chance to seal up windows or doorways to prevent the 1/4 inch of dust from invading our homes and automobiles on a daily basis.

I personally do not have the funds to have the material tested to see if any of it contains asbestos or lead, but I would sure appreciate it if someone would do so. I saved some of the material that was left laying around the building when the workers finished.

Also, another red flag was that I never saw a building permit posted anywhere on the property or any inspectors on site ever and thus am led to wonder if the city was even informed of the work?

Thank you for your time. If there is someone else I should have contacted I'd appreciate your response with the details of to whom I should speak and how to proceed with reaching them.

**Comments** ATM Holdings, LLC has been issued a Letter of Warning for failure to inspect for asbestos prior to renovations.

### Concerns Investigated Between

### October 16, 2022 and December 15, 2022

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51489    **Concern Info** CP states there is dust additives coming from the plant into outside air. He is concerned about people's health because of it. He said someone needs to make a surprise visit to check it out or they will fix the problem ahead of time if you call.

**Comments** I began this investigation with an offsite surveillance of the plant for visible emissions. Noting none, I then went to the facility to interview personnel on site. I spoke with Daniel Chamberlin, Environmental Coordinator, and with Allen Horton, Environmental Maintenance Technician. These Personnel were not sure what was meant by dust additives. I told them that I had been working under the assumption that the Concerned Party was referring to the scents and other similar product ingredients in use at this facility. Nestle Purina Petcare Company manufactures cat box filler at this location that is sold with various brand names. The product has an active ingredient absorbent clay. The fragrances that are added are often liquid, but some are used in powder form. The facility uses baghouses to aspirate or control emissions of the various products at the transfer points as the cat box filler product flows through the plant. Prior to being applied to the product(s) the fragrances are stored inside a building. I did not note any of the fragrances until I was on Nestle Purina's property. The fragrances are strong inside the building in the area where they are stored and applied to the cat box filler product(s). Outside they are faint. These fragrances to me are not unlike the fragrances used in laundry products such as detergents or fabric softeners.

The baghouses in use at this facility are subject to performance testing when installed and to routine inspection, maintenance and repair after that.

No violation of applicable air regulations (such as Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.170 Restriction of Particulate Matter to the Ambient Air Beyond the Premises of Origin or 10 Code of State Regulations 10-6.165 Restriction of Emission of Odors) was noted.

**Concern No.** 51434    **Concern Info** Burning tires next to homes and vehicles.

**Comments** Before visiting the property, I contacted the Scott County Sheriff's Department for a brief history on the property and owners. Based on discussion, it was decided it would be best to be accompanied by someone from the sheriff's department while conducting this investigation.

On September 28, 2022, I arrived at the property. I was accompanied by Dawson Bennett, Env. Specialist, Detective Michael Williams, and Lieutenant Robyn Meredy of the Scott County Sheriff's Department. While conducting the investigation, a large number of tires were observed on the property. It was a mixture of used and scrap tires. I went over the requirements with Mr. Groves about what determines if a tire can be classified as used or scrap. We also went over the requirements to be able to haul scrap tires. In Missouri you are required to obtain a permit in order to haul and dispose of scrap tires.

?No open burning of tires was identified during the investigation. Mr. Groves was provided awareness of not conducting these actions.

While on site it was estimated that Mr. Groves had somewhere between 800-900 tires on site. When asked where the tires originated from, he stated that individuals and two shops in particular provided him tires. The shops were JSK and Heavy D, both located in the Charleston area. He also stated that he disposed of tires in Benton Illinois, but at the time of the investigation was not able to name the shop. He was instructed to not move any scrap tires, unless they were cut up and then he could properly dispose of them at a permitted waste disposal facility. Otherwise, he was to contact a permitted scrap tire hauler to load the rest of the tires.

As of October 7, 2022, Mr. Groves is attempting to dispose of the scrap tires through Hensons Transfer Station. He can either transport cut tires, or bring in a roll off trailer and load the cut/uncut tires accordingly for proper disposal. A followup will occur to determine if Mr. Groves has removed the scrap tires from his property. ??

**Conclusions**

?A NOV(#SE220028)?? was issued per ACE ID 51378 on 10/11/22. Follow-ups will occur as needed to determine proper scrap tire disposal.

**Concern No.** 51469    **Concern Info** CP states a construction crew is burning construction material near the road on MacIntosh Lane. There is a huge pile of construction debris and other materials that should not be burned at the back of the development

**Comments** I arrived at the site around 9:10 a.m. after surveying the area of concern, where two small burnt gravel areas were noted I met with Chris Gore. I provided my credentials and explained to him the reason and scope for this visit. I met with site foreman Chris Gore and an employee Dewayne Moyer. Dewayne Moyer admitted some small burning took place at the houses in question, Chris Gore explained some small burning is sometimes done to warm up equipment such as compressors in cooler weather. I explained to the two participants that construction waste should not be burned unless it meets the definition of untreated wood. I provided a copy of "Missouri Secretary of State Code of State Regulations Open Burning" and "Facts on Open Burning Under Missouri Regulations - PUB 2047." Dewayne Moyer did state that the crews were reminded not to burn "Treated wood" last week by a crew lead. Both parties agreed to be more mindful about burning on the property. I asked Chris Gore about the large pile of miscellaneous construction debris, household trash and vegetative waste and he explained to me once the development reaches that area of the property the pile will be hauled off by truck. I thanked the two for their time and information and concluded the investigation.

No further action required??

**Concern No.** 51556    **Concern Info** CP states they can smell diesel fuel coming from neighbors property across the creek. CP also states that the RP burns oil in their woodstove when they start it up. Cp states there is a lot of junk on the property also.

**Comments** On November 2, 2022, I arrived at Hunsaker Towing. I met with site personnel, Bryant ?, and advised regarding the concern received. He contacted Mark Hunsaker via phone, and I talked with him regarding the concern received. He stated used oil stored on site is not generated from operations on site, but via personal vehicles. The oil is not burned on site, but instead is given to a local homeowner for burning. We discussed oil generator status, labeling and storage, and allowances via oil fired space heaters. He referenced looking at taking to local oil change locations in Perryville going forward.

No visible staining or runoff concerns were identified on site. I discussed with Bryant basic housekeeping efforts, and he agreed that they look for any spills or leaks and to cleanup. No solid waste concerns were identified.

No solid waste or runoff (diesel) was identified on site or the adjacent creek on back side of the property. Used oil is not generated from commercial (only personal) vehicle up keep. Plans were to take used oil to oil change locations in Perryville.

### October 16, 2022 and December 15, 2022

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51617    **Concern Info** Burning storage unit property. Appliances, furniture, bulk stuff that burns and booms and burns our eyes. 1 to 3 times a night. Out of hand, spring fed stream getting all the run off.

**Comments** I arrived at the concern address at approximately 3:00 PM on November 7, 2022. There was no active open burning going on at the address from what I could tell. I was able to speak with Bridget Sutton, wife of Richard Sutton, who told me that Richard wasn't home at the time. I explained to Mrs. Sutton that the reason for my visit was because of an open burning concern. I explained to Bridget that it was mentioned in the concern report that several things were being burned at this address such as appliances, furniture, and various other bulk items. I asked Bridget if she was aware of any open burning going on. Bridget told me that they burn some household waste in the backyard, but that they've never burned any appliances. Bridget informed me that her husband, Richard Sutton, brings home property that he purchases from storage units and will either keep some of it, haul it off to sell, etc. Bridget did mention that it's possible a piece of furniture may have been burned, but it's mainly household waste that they burn.

I gave Bridget a copy of 10 Code of State Regulations 10-6.045 Open Burning Requirements as well as PUB2047 - Facts on Open Burning Under Missouri Regulations and my business card and explained to her what is allowed to be burned in Missouri. I explained that all that is allowed is vegetative waste, untreated wood, and household waste essentially. I informed her that furniture, appliances, etc. should not be burned. Bridget agreed to not burn any other furniture pieces and told me that she would relay the information to her husband.

Bridget Sutton informed me that no appliances are burned at their address and that they do burn household waste. She also mentioned that a piece of furniture may have been burned and could have caused the concern. I gave Bridget fact sheets/regulations and explained to her the regulations and informed her of what can and cannot be burned. Bridget agreed to not burn anything that should be burned from here on out.

Concerns Investigated Between  
October 16, 2022 and December 15, 2022

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51786    **Concern Info** CP states that RP deals with stripped down auto's and is burning the parts he does not recycle. He is burning the insulation of copper wires as well. He has a tire sitting by the pile that he intends to burn again. This burning is affecting the CP's health. Smoke so bad CP cant breath. This concern was entered and worked previously, but RP continues to burn without regard to anyone.

**Comments** I arrived at the concern address at approximately 12:10 PM on November 7, 2022. It looked as though nothing much had changed since my last visit on October 12, 2022. The burn pile at the front of the property still had a few tires around it with one tire on top of the pile. I could see some steel belting and what looked like bits of rubber in the burn pile indicative of a tire being burned. I instructed Mr. Hemrick to move the tires far away from the burn pile and that tires could not be burned at all during my last visit.

I walked up to the door and knocked several times, but there was no answer. There was another burn pile near the house, which Mr. Hemrick instructed me was his household waste burn pile back in October. This time, there looked to be a lot of construction/demolition waste near the pile, but none of it looked like it had been burned.

?Since nothing has changed since my last visit and there are still tires on a burn pile with remnants of at least one tire being burned, a Letter of Warning (LOW) is likely the next step.

ince my last visit to this site on October 12, 2022, nothing much has changed. Mr. Hemrick has not moved the tires away from the burn pile. There is still a tire on top of the burn pile with some visible steel belting and bits of rubber in the pile. A Letter of Warning (LOW) is likely the next step in attempts to mitigate a tire fire from occurring and to properly dispose of any tire fire waste.

**Concern No.** 51630    **Concern Info** CP states the business behind her had dug a big hole and burning something that stinks really bad and it black smoke is going in the air. She said you can't stand to be outside.

**Comments** I arrived at the site around 11:30 a.m. on 11/04/2022. I was unable to access the property due to a surrounding fence and locked gate. There was a large dirt pile with a small amount of gray or white smoke coming from the far side. The property is currently in the process of being sold. I called the realtor Emily-Dugan-Deuster she provided the seller with my information. Around 12:00 p.m. Kevin Presley called me to explain the burning. He explained to me on Monday October 31st around 1000 used untreated pallets that were left from former owners were placed in the hole and burned. The pallets were in poor condition and anywhere from 3 to 5 years old possibly older. The condition of the pallets could possibly be the reason the concerned party reported black smoke that smelled badly. Kevin Presley informed me that while cleaning the property for sale 3 forty-yard dumpsters where filled and removed, Kevin Presley offered to send receipts of dumpster removal. Kevin Presley did mention he has already had DNR personnel provide him with open burning regulation and was sure to only burn untreated wood in this cleanup process.?

No further investigation needed.

**Comments** arrived in Caruthersville at approximately 12:40 PM on November 9, 2022. At 12:45 PM, I called the city hall and spoke with Barry Gilmore, Building Inspector and Code Enforcement Officer. Barry's phone number is (573) 724-6715. I spoke with Barry about the environmental concern we received regarding the demolition of the old welfare building that was more recently some apartment buildings. Barry told me that he believed the address of this building was 309 Highland Avenue. I thanked Barry for his time and went to take a look at the address that was given to me.

Arriving at 309 Highland Avenue, I could see that half of a building was demolished and debris was just lying around where that half of the building once stood. I did not notice any outstanding potential ACM in the debris. There was a yellow John Deere 135G Mid-Size Excavator next to the building, but no one was around while I was there. I took some photographs and left the area.

On November 16, 2022, I called the demolition contractor (Howard Prater) of a project (D11122-2022) that took place at the beginning of 2022 at 310 Highland Avenue in Caruthersville thinking he may have some information. Mr. Prater told me that he had no involvement with anything going on at 309 Highland Avenue, but that he was aware that Southern Tree Care had some involvement with it. I thanked Mr. Prater for his time and information.

I did some research and found that Brian McCloud runs Southern Tree Care. I found his phone number on a Facebook page and gave him a call on the same day, November 16, 2022. Mr. McCloud informed me that he is the one that is demolishing the building. He informed me that the building has burned several times and that someone had gutted the inside. He said that he demolished the first half due to the walls bowing out and it being a safety concern. Half of the building is demolished, but half still stands. Brian told me that he started the demolition on Monday, November 7, 2022 and that it will probably two or two and a half weeks before he begins the second half of the demolition.

Brian told me that he did not have the building inspected because he wasn't aware apartment buildings needed to be inspected. Brian mentioned that he planned for debris to be taken to the Pemiscot County Transfer Station and that Sharp Disposal would be transporting the waste. Brian told me that he has worked with Mark Bonney, Missouri Certified Asbestos Building Inspector, in the past and wouldn't mind getting an inspection if one needed to be done.

I told Brian that an asbestos inspection would need to be performed. I encouraged Brian to leave everything where it lay until the inspection was completed and to do not demolish anything else for the time being.

Mark Bonney called the Southeast Regional Office on November 22, 2022 to inform us that he had performed a building inspection in Caruthersville. I called Mark back on November 23, 2022 to see if it was the 309 Highland Avenue building and it was. Mark said that he expects results to get back

**Concern No.** 51711    **Concern Info** CP states I have a concern about the farm operation (Woolverton Farms) (Jake & Joe Woolverton) Located on the end of West Railroad Street here in Gideon Mo. I woke up this morning to a cloud of thick black smoke from them burning item in a pit behind the concrete wall on their property. My concern is this smoke from the 5 loads of tires he hauled in and dumped behind the wall back in the summer or is this chemical container being burnt.  
  
I have also noticed that his diesel fuel tank has not been put inside of a concrete retaining wall yet and he has been over a year at this location. If this tank were to leak or turn over, it would send diesel fuel down a small ditch that would runs right behind the nursing home here in Gideon as well as a residential Neighborhood.  
And the last thing is I have reason to believe that they have cleaned or washed their spray cycle tanks out and the Dicamba or the generic form of Dicamba that they used this summer vaporized and has done damaged to some of our trees, I noticed back in the summer that after they had cleaned the tanks out that the tree leaves started to cup up on serval of the trees. After doing some research I finally realized that it was from the vaporizing of the chemical and not the dry conditions.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Comments** assisted Jesse Evans with this concern as part of a joint investigation between the Air Pollution Control Program and Solid Waste Program. We arrived at Woolverton Farms at approximately 10:15 AM on November 14, 2022. We drove around the neighboring streets of the farm looking for any signs of open burning or tires, as was listed in the concern form. We saw no active signs of open burning, but we did see a large pile of tires at the south side of the farm behind a large cement wall.

We drove onto the farm in hopes of finding Jake or Joe Woolverton. We spoke to a Mr. Peter Leroux and Grant St. Cin who worked for the farm. We explained our reason for the visit and both gentlemen informed us that no tires are burned here, nor are any chemicals. They explained that they do have several tires and aren't really sure where they all come from, but they do not burn them. The two men gave us Jake Woolverton's phone number. Jesse Evans gave the gentlemen several fact sheets, including PUB2047 - Facts on Open Burning Under Missouri Regulations, and we left to give Jake a call.

We called Jake from the front of the property and arranged to meet him at the farm as soon as possible to discuss the concern. Jake met us at the front of the property approximately 30 minutes after our phone call. Jake took us back to the large cement wall where the tires were piled up. There were quite a few tires piled up varying in size from passenger car tires to large tractor tires. On our way back to the south side of the farm, Jesse and I did not observe any signs of there being anything open burned. Judging from Google Maps, it looked as if there used to be a large building on the farm that was either demolished or destroyed and now served as a large concrete pad to store everything from scrap metal to farm equipment.

Jesse went on to explain to Jake Woolverton about the scrap tire regulation. He provided him with several fact sheets, again including PUB2047 - Facts on Open Burning Under Missouri Regulations. From an air pollution standpoint, neither one of us were able to identify any signs of open burning. Jake admitted to sometimes burning some cardboard and questioned us about the possibility of burning some pallets. We advised Jake to stay away from burning pallets as they are most likely treated and therefore illegal to burn.

--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51762    **Concern Info** I live at 317 Alton Road in Thayer Missouri. My new neighbor just cut down many branches and limbs from trees and bushes on his property yesterday (11-8-22) then burned that with leaves and the smoke was going into my home for hours. When I got home I saw the fire was still burning and I went inside my home and smelled the smoke. It had been creeping into my vents and was permeating inside of my home. I started to have a headache and challenges breathing. I have asthma and felt it best to ask the neighbor (Solomon Cornelius) who just closed escrow on the home (319 Alton Rd, Thayer MO) that same day and was there doing the cutting and burning if he could use the blower that he had there to blow the smoke away from my home. He said no and refused to put out the fire or get the smoke to blow away from my house and vents just 10 or 20 feet away from his burning fire. Solomon Cornelius has been buying up several properties now around my home (319 Alton Road this week, 316 Alton Rd several months ago and 321/323/325/327? Alton Rd just a couple months back or so. We have spoke a number of times. I am not certain why he thought it was ok to burn a fire so close to my house even if it was on the property he just purchased. He could have easily burned the leaves, limbs and branches on the other side of his property especially since the wind was blowing in the direction it was, and he should have. I am curious if it is ok to send poison or other hazardous fumes or smoke off of their property in such a way that it goes into the home of a neighbor. I don't believe it should be lawful. If it is in fact illegal to allow smoke from a fire on your property to enter your neighbors home please assist in bringing charges for this occurrence and if not please change the law immediately as this is not something that should be permitted in any state. My neighbor should never again be burning fires so close to my home that smoke enters the crawl space and attic vents again. All of my doors and windows were closed but the smoke was going into the vents for a while prior to me getting home. I immediately got my own blower out and blew the smoke away from going toward my home and blew it out of my house too. There needs to be a written law prohibiting gases, smoke or other emissions from going into people's homes if there is not one already.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<b>Comments</b> I spoke with the RP Solomon Cornelius on 11/14/2022 by phone. He informed me he has purchased the houses around Scott Browns residence in hopes of cleaning up the area around his business across the street. This leaves Solomon Cornelius the owner of most the property directly across from his business. He did say on 11/8/2022 he did burn leaves at the house in question, but they were in small piles throughout the day. No limbs or tree trimmings were burned the day of the incident, those materials will all be moved into a more open area on the property across from the his real estate office to be burned with permission from the city. All prohibited material such as plastics and furniture were hauled to West Plains. I reached out to Scott Brown by phone and left a message on 11/14/2022, but have not made direct contact with him yet. Solomon Cornelius did suggest that there is a possible business/financial reason behind Scott Brown submitting this concern to the Missouri Department of Natural Resources since he is also a realtor in the city of Thayer. The City of Thayer was contacted to inquire if the city had an ordinance regarding open burning and I was informed by a man named Brent that the city does not allow residence to burn trash inside city limits. At this time, there are no regulations or laws being broken and there is no need for further investigation.? No further investigation is needed at this time.

**Concern No.** 51883    **Concern Info** CP states the Quarry has so much dust you can't hardly see. It looks like a cloud of white

**Comments** arrived in Fruitland on November 22, 2022 at approximately 12:15 PM. I pulled over on the shoulder of the southbound lane of Highway 61 adjacent to Base Rock Minerals. I observed the Base Rock Minerals site for several minutes in search of any potential dust emissions. I noticed that the haul roads must have just been watered seeing as they were still adequately wet. I could see no dust emissions from the quarry. There is also a concrete plant and asphalt plant at the front of the Base Rock Minerals property. I saw some emissions from the asphalt plant, but not enough to be a violation.

I went inside the quarry office and met with Greg Berry (Managing Director) and Mitch Donze (Quality Control) and spoke with them for a while about the concern the Department had received. I asked Greg and Mitch if they could recall any recent malfunctions that may have constituted a large amount of dust. Neither of them could recall any malfunctions. I was then informed that on the previous day, November 21, 2022 around 3:30 PM, they shut off the water lines to blow them out while the plant was still operating. There had been some recent freezing temperatures and they needed to clear the water lines, but by doing so while the plant was still operating, it caused a lot of dust. As Greg and Mitch described, this only lasted about 15 minutes before they stopped clearing the water lines to minimize the dust.

This act was the only thing they could think of that would have caused a concern on November 21, 2022. Apart from clearing the lines, Greg and Mitch told me that the quarry had almost no emissions that day. They told me that they will not try to clear the water lines while the plant is still operating again and they apologized for the concern it caused. While I was there on November 22, 2022, I noticed no emissions from the quarry, the haul roads were adequately wet, and it was mentioned to me that Base Rock Minerals sweeps the haul roads every morning. It appeared clear to me that this facility is doing whatever they can to reduce dust emissions and it seems to be working. No violations noticed.

On November 21, 2022 at approximately 3:30 PM, the water lines were shut off and blown out to be cleared from recent freezing temperatures. This was done while the plant was still operating and caused a lot of dust to be emitted for 15 minutes. Apart from this, there were no emissions noticed during my investigation, the haul roads were adequately wet, and roads are being swept every morning.

**Concern No.** 52009    **Concern Info** Pulled the house down yesterday and dug a hole and is burning. The concerned party states that David Lovell and Josh Plant are involved with the demolition activity.

**Comments** The investigation was conducted during normal business hours. The investigation was unannounced and was conducted during the morning of December 12, 2022. Since there was no one on site, I took photographs from a nearby off site location. A mail box labelled 411 was apparent on the other side of the street from the former location of the residence at 411 Garfield Street in Fisk. I telephoned the City Hall in Fisk on the morning of December 13, 2022 and I spoke with Heather Mosbey, who works as a Fill-in City Clerk, a Volunteer Fire Fighter, and is a Town Council Member for the City of Fisk. Council Member Mosbey stated that Gary Lacy was the owner of 411 Garfield Street and she gave me his telephone number. The residence at 411 Garfield had been a rental home that had caught fire three times prior to its being demolished. Council Member Mosbey was aware of Gary Lacy because he had attended a recent Fisk Town Council meeting and had asked what he needed to do to place a trailer on the site. Council Member Mosbey stated that the lot would need to be cleaned off so that a concrete pad or concrete runners could be poured for supporting the trailer. Council Member Mosbey also stated that David Lovell and Josh Plant who had worked for Gary Lacy on the residential demolition at 411 Garfield Street do not have telephones or jobs.

On December 19, 2022 I contacted Gary Lacy by telephone. Gary Lacy stated that he has a broken leg and that his leg has been broken for over a month. For this reason Gary Lacy was not in Fisk during the demolition project. Gary Lacy had hired David Lovell and Josh Plant to haul off all the demolition wastes and had offered them the use of a trailer to help with the hauling. Gary Lacy did not know what if anything had been open burned during the demolition. Gary Lacy did know that some of the wood materials from the residence had been sold including a trailer load that I had observed on site during my morning site investigation of December 12, 2022. Gary Lacy stated that no one had informed him of any prohibitions against open burning; but that he would try to comply in the future. Gary Lacy supplied both his Brosely mailing address and his electronic mail address and I sent a copy of Missouri Air Conservation Regulation 10 Code of State Regulations 10-6.045 Open Burning Requirements, the fact sheet Facts on Open Burning Under Missouri Regulations – PUB2047, and the fact sheet Managing Construction and Demolition Waste – PUB2045 by electronic mail on December 20, 2022.?

The facility was in violation of Missouri Air Conservation Regulation 10 Code of State Regulation 10-6.045 Open Burning Requirements based on the fact that open burning of demolition wastes had occurred closer than 200 yards from the nearest structure not owned by the party doing the open burning.

**Concern No.** 51884    **Concern Info** CP states that the RP burned and buried an old house on some property behind the Glenwood Elementary School in West Plains. CP states that the house had old asbestos siding and they are concerned with the asbestos being burned and buried near a school.

**Comments** I arrived near Glenwood Elementary School at approximately 11:00 AM on December 8, 2022. From MO-17 I could see nothing out of the ordinary. I could not see any burned structures nor any place with fresh dirt indicative of something being buried. I then traveled east along County Road 8800 since the concern report stated that the structure was being buried behind the school. I traveled along County Road 8800 for at least a mile before turning around. Again, I could not see any burned structures nor any evidence of something being buried.

I continued driving in the vicinity for another 15 minutes with no luck seeing any evidence of a structure being buried. I took note of the area I searched and lack of findings and concluded my investigation. ?

I drove around the vicinity of Glenwood Elementary School and along County Road 8800 and could not see any evidence of structures having been burned nor any evidence of structures being buried.

**Concern No.** 52010    **Concern Info** CP states there was a fire a month or so ago and the fire department couldn't get the fire put out because of the materials that were in it. It is a tree service and they keep hauling more trees in there and burning. The smell is terrible and sometimes blows across Highway 74 & 25. Gordonville Fire Department has been out in the past to try and put it out.

**Comments** Around 4:00 p.m. on 12/14/2022 I reached out to Advanced Tree Service and spoke to owner Tony Trendall. He informed me that Advanced Tree Service does own the property in the intersection of hwy 25 and hwy 74. A fire started at this site under suspicious circumstances around a month prior to this concern. When asked about the smoldering fire on the site Tony Trendall informed me the fire had died down significantly due to heavy rain on 12/13/2022. He informed me that the wood piles and chip pile has been sectioned off and no more materials have been added to the burning piles or in an area where any remaining fire could spread. Now that the rain has helped to put out the fire along with manual interaction Tony Trendall is hoping to get the fire put out soon. I asked for contact information for Tony Trendall because this site has had problems in the past.? No further investigation needed.

<p><b>Comments</b> I began my site investigations at the St. Jude Industrial Park on December 13, 2022 at 10:40 a.m. The weather was cloudy with a temperature of 54 degrees Fahrenheit. The wind was out of the Southeast at 12 miles per hour with gusts up to 24 miles per hour. The relative humidity was 87 percent. I arrived in the area and I took up a position to allow viewing of Alubar Metals (10:40 a.m. to 11:05 a.m.). Various truck traffic was noted entering the facility such as a United Parcel Service truck. No fugitive particulate matter emissions issue was noted. I moved to try to view the northern property line of Magnitude 7 Metals and a stationary train blocked my view. I conducted a surveillance of the area to look for other fugitive dust issues (11:05 a.m. to 11:30 a.m.) I returned and watched Alubar Metals (11:30 a.m.) I then left the area (12:00 p.m.). Other facilities in the St. Jude Industrial Park with potential for particulate matter issues include Nutrien Ag Solutions, Nutrien ESN, Riceland Foods, ADM Grain, Associated Electric's New Madrid Power Plant, and farmland.</p> <p>I returned to the St. Jude Industrial Park on December 29, 2022 at 10:29 a.m. The weather was cloudy and the temperature was 57 degrees Fahrenheit. The wind was from the South at 17 miles per hour with gusts up to 33 miles per hour. The relative humidity was 86 percent. I briefly parked where I had a view of Alubar Metals (10:29 a.m. to 10:52 a.m.) and did not note any fugitive particulate emissions. It appeared that the ground was still moist from recent rains. I moved to a position where I could view the northern property line of Magnitude 7 Metals (11:09 a.m. to 12:02 p.m.). The activity I noted at Magnitude &amp; Metals appeared active with frequent trucks from FAM trucking of Portageville hauling aluminum metal out of the facility. Other truck activity was also noted arriving and leaving the area during my surveillance. I noted only stack emissions during this period of observation. I did not observe fugitive particulate emissions. I left the area. I returned to the area where I could view the northern boundary of Magnitude 7 Metals (1:20 p.m. to 1:50 p.m.). The weather was cloudy with a temperature of 61 degrees Fahrenheit. The wind was from the South at 17 miles per hour with gusts up to 32 miles per hour. The relative humidity was 86 percent. I viewed additional truck traffic including FAM Trucking hauling aluminum metal out of Magnitude 7 Metals. No fugitive particulate matter issues were noted. I left the St. Jude Industrial Park.</p>								

I telephoned Alubar Metals on the afternoon of December 29, 2022 and I eventually spoke with Jason Baughn who works as a Quality Coordinator and Environmental Coordinator for Alubar Metals Missouri, LLC. Jason Baughn stated that trucks hauling in raw materials to Magnitude 7 Metals had been a problem during the silt loading tests. Both the July 2022 test and the subsequent test had been impacted by dust from Magnitude 7 Metals because their haul road was producing fugitive particulate matter emissions. He had not seen the problem for a month or so. He stated that it was his understanding that the truck traffic at Magnitude 7 Metals had been increased during the drought because they were having to obtain some of their raw materials by truck that they would normally receive by barge. (The Mississippi River was at its lowest level in decades.)

I telephoned Art Nispel, Director of Environmental and Health at Magnitude 7 Metals. Art Nispel stated that calcined petroleum coke was the raw material that had been received in part by truck during the drought in Southeast Missouri. Art Nispel further stated that three buildings at Magnitude 7 Metals that

**Concern No.** 51919    **Concern Info** Missouri Department of Natural Resources (Department) personnel witnessed black smoke emitting from confined animal feeding operation (CAFO) poultry houses located north of Hwy 60 between Fisk and Dudley.

**Comments** Jason Kirkman and I arrived at the site around 10:30 a.m. on 12/13/2022 for the initial investigation. This concern was located at a former confined animal feeding operation (CAFO), the facility has been properly closed out with the Department and has not had poultry on site for 4-5 years. Upon arrival there was a single fire lit on site where untreated wood and insulation paneling were being burned, creating thick black and gray smoke. Once arriving on site at the CAFO we were met by crew chief J.P. who after being informed of the prohibited burning promptly stopped the burning. We began the investigation by gauging the demolition plans of the crew. Where J.P informed us the tin will be removed for salvage as well as the treated wood and steel components of the building. The fire on site was still burning, but with no more materials being placed on the fire it was dying down. J.P also alluded to the property owner having plans to do the same thing at another site. I provided J.P with " Facts on Open Burning Under Missouri Regulations - PUB 2047", "Missouri Secretary of State Code of State Regulations Open Burning" and "Managing Construction and Demolition Waste -PUB2045." I strongly advised that the burning on the insulation cease and that the material should instead be collected and taken to the landfill. We collected contact information for the owner of the property to set up a later meeting.

Josh Wilkerson and I arrived on site around 9:30 a.m. on 12/14/2022 for a meeting with property owner Justin Landers. Upon meeting with Justin Landers we explained to him the meaning and scope of the visit. We informed him of the prohibited burning that had been taking place on site. He informed us that the open burning would stop and that he had plans to now collect the non-salvageable material in a roll-off dumpster and transport it to the landfill. He explained to us his plans going forward to remove the material from the site. We informed him of the regulations regarding asbestos inspection and commercial buildings and that a demolition project notification should have been submitted to the Department before demolition started. We directed Justin Landers to DNR Web and where he can find asbestos resources. I provided Justin Landers with " Facts on Open Burning Under Missouri Regulations - PUB 2047", "Missouri Secretary of State Code of State Regulations Open Burning", "Managing Construction and Demolition Waste -PUB2045", "Asbestos Requirements for Demolition and Renovation - PUB 2157" and "Illegal Disposal of Construction and Demolition Wastes - PUB-2251." Justin Landers was very understanding and receptive of the information and informed us that he would remain in touch with the Department. ?

Additional site visits will be conducted to monitor progress.

**Concern No.** 51741    **Concern Info** Rick Garcia (314-630-1868) called regarding the new subdivision being constructed on MacKenzie Road in Affton known as "The Preserve." McKelvey Homes is in charge of construction at the site. According to Mr. Garcia, the dust and particles coming off the site has been getting on his vehicles and he has spent hundreds of dollars on car washes. The dust/particles coming from this project also is affecting his own home project - he cannot get started on his deck but feels he has to put it off now. Mr. Garcia has spoken with Jim Piper of McKelvey Homes and Dave Osmoff (sp?) who is a site manager. Mr. Osmoff apparently claimed that the company spend \$30,000 on water trucks but Mr. Garcia has not seen them in regular use. Mr. Garcia has submitted several concerns to St. Louis County, who has been out several times. The most recent time STL County went out there, the inspector observed water trucks, but Mr. Garcia says this was only due to the County being on site. Mr. Garcia wanted to speak to Miranda Cason regarding this but as she was out in the field he wanted to submit an additional concern.

Mr. Garcia is also convinced sediment/dust is traveling off site and entering the nearby MacKenzie Creek.

**Comments** Miranda 10/20/2022: I drove to tower tee (11:10 am), which borders the preserves development and noticed no visible operations. I then drove to Resurrection Cemetery and observed haul road activity. Visibility of the property has improved since the tree foliage is falling. I observed vehicular traffic and a front-end loader in operation (11:30am). No dust left the property boundary. I Then drove to the Ashbury neighborhood bordering the property (12:00pm). I witness no dust enter the neighborhood.

Miranda 11/3/2022: I took a lap around the around the property and ended up observing from Resurrection Cemetery from 1:30pm-1:50pm. Dust generated on the haul road was blowing away from the Ashbury neighborhood and I could not see activity from the location. It appeared that activity is moving closer to tower tee. I drove to tower tee but could not get a good view. It appeared to be a slow day at the preserves and the wind was blowing away from the neighborhood of the concerned party.

Miranda 11/22/2022: I observed activity within the preserves from the retention pond located in Resurrection Cemetery from 1:00pm-1:40pm. There was activity on the haul road and a front-end loader in use but no dust left the property boundary. I drove through the Ashbury Neighborhood and stopped at Tower Tee. I saw no dust leaving the property.?

**Concern No.** 51449    **Concern Info** Online concern form:"Please describe your concern, including the location on the property.  
Hello I hope this is the right department to contact.

2919 Caddiefield Rd  
Pleasant View Gardens  
Formerly Known as Canfield

My sister sand her children stay in this property.  
The property is filled with mold and temporary ac/heating units for over a year now.  
The property should really be inspected and the owners need to be held responsible.  
My sister can't obtain an occupancy permit because her apartment didn't pass the county inspection.  
So her kids can't go to school in the district because they can't obtain an occupancy permit.

Honestly I don't understand how these apartments are still up and running.

One of her neighbors floors are soaked with water when you walk from broken pipes.

A lot of these people are low income and don't have a place to stay so they are staying in these unhealthy unsafe conditions.

It's like they sell or rename this property and the county does not hold them responsible.

It's a lot of kids in these apartments.  
One of these babies are going to get really sick.

The state , county , or health department really need to look into this situation. "

**Comments** ?Referred concern to Aaron Cadman with St. Louis County Air Pollution Control Program. He referred it to the county Department of Public Health Healthy Homes Program, and received confirmation that they would look into it. DNR does not regulate mold/indoor air quality.

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
SLRO	11/2/2022	10/18/2022	Crown Quarry Myers Road (Bedrock Quarry)	Lincoln	Particulates	MC		

**Concern No.** 51622    **Concern Info** EPA online concern: "Caller reported that dust from the Bedrock Quarry LLC located at 2150 Myers Road in Troy is impacting his residence. Caller stated that the dust has been an ongoing issue but the dust levels have been specifically worse this past week. PDO passed referred caller to MoDNR and passed information to R& ECAir Air Branch."

**Comments** Miranda 11/2/22: I drove to bedrock Quarry and stopped by the scale house to initiate a routine air inspection. The scale house operator told me that John Follmer would be a good person for me to contact but that he was occupied with another inspection. I was given Johns contact information. I told the scale house operator that we had received a concern call about fugitive dust at the property and that I was going to observe from the haul road for a while and that I would give John Follmer a call to follow-up with the air inspection.

From 11:45am to 12:15am I observed dump trucks exiting the haul road with minimal dust from most of the trucks. One truck I noted to be driving much faster than others created dust that got on the road and traveled about 15ft with the vehicle up the road with an opacity of 10%. However the track out on the street was minimal and the dust created was not near any places of residence or business.

I looked on google maps to determine where the residential area the concerned party mentioned was located. It seemed that the Brook Hill neighborhood to the east of the quarry was the likeliest area. I observed Quarry activity from various vantage points in that subdivision from 12:20pm to 1:00pm. I noted dust being produced on the property but none of that dust left the property boundary.

Miranda 11/3/2022: I contacted John Follmer and spoke with him about the concern. We will meet on 11/9/2022 at Bedrock Quarry to conduct the air inspection.

--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51518    **Concern Info** Miranda 10/14/2022: Georiga Bartlet called to inform us that Simpson Materials Barnhart Quarry has been producing dust that is leaving the property boundry and entering the neighborhood of Sulphur Springs, Imperial, MO. She stated the dust can be seen in the air, on houses, portches, and other staionary property. The times of peak dust is generally around mid-day. This location was investigated and inspected by myself in May and June 2022 respectivley. Geogia also mentioned exsessive trackout from the facilities haul road onto the street.

10/20/22 Ms. Bartlett contacted us again regarding the concern. She stated the dust has not been dealt with and is becoming a health issue for her and her neighbors. She stated it is impossible to keep her house, her cars, or her yard clean from the dust. She said the dust is so thick it is almost like a fog, and she cannot even see the river from her home. She would like an inspector to stop by the quarry a couple of times about this issue as she says it is impossible to not catch a violation from this dust.

**Comments** ?10/26 SEL. I drove around the Sulfur Springs neighborhood for around 15-20 minutes, and did not see any dust leaving the quarry. It should be noted that from the neighborhood, the Barnhart Quarry cannot be seen from the neighborhood. I did not see any dust entering the neighborhood from any angle. I drove to the quarry afterwards, and did not see any major dust plumes being generated nor leaving the property. I spoke with the scale operator at the facility and reviewed the facility's watering actions. The facility waters all haul roads and the pit multiple times per day. The facility also operates spray bars on most of the equipment. It should be noted when the concern was recieved the St. Louis area had not recieved rain in many weeks and the area was in a drought. I will periodically check in on the neighborhood and facility to check on dust. At the time of the investigation, no violations were noted.?

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
<b>Comments</b> On June 18, 2012, Mr. Johnson reported to the EPA that he smelled acetone and chlorine around his home. He indicated that he believed the odor was caused by his neighbor, who was trying to poison his dogs. He alleged that he had found dead squirrels around his home. He claimed to have placed test strips around his home that indicated the presence of chlorine. The concern was forwarded from the EPA to SLRO. Kevin Arnold with SLRO investigated the concern. He met with Mr. Johnson. He did not note any unusual odors at Mr. Johnson's house or around the neighbor's house, and did not find any visual signs that chemicals were being sprayed. He did not find any industrial sources around the residence that could be emitting odor.								
On July 2, 2014, SLRO received a second concern from Mr. Johnson, again alleging that odors (described as sulfur, rotten eggs, or insecticides) were being sprayed by his neighbor, and were causing respiratory issues in himself and his dogs. At this time, the alleged neighbor was Ben Alexander at 8932 Berkay Avenue, the house immediately next to Mr. Johnson's. Kevin Arnold contact Katrina Donegan of the St. Louis County APCP at this time, and learned that Mr. Johnson has been contacting them regularly for several years. St. Louis APCP had conducted several investigations and found no evidence or validity to the concern. Mr. Johnson was advised to contact the police department or fire department in the future.								
On February 2, 2015, SLRO received a third call from Mr. Johnson regarding sulfur odors and respiratory problems. John Mullen of SLRO investigated the concern. Mr. Mullen reviewed the area for any potential sources that DNR could regulate. He visited Jennings High School, which is two blocks north of the concerned party's residence. He did not find any odors, or potential sources of odors at the high school. He spoke with a neighbor at 8929 Whitstone Court to the east of Mr. Johnson and the resident there said they have not noticed any sulfur/acetone odors. Mr. Mullen visited Mr. Johnson and toured his home and his yard, and did not notice any odors. No action was taken as no potential sources of odor were identified.								
On June 29, 2016, SLRO received a fourth call from Mr. Johnson regarding a strong chemical/insecticide odor. Tom Sims took the concern call. When Mr. Sims explained that we have investigated this concern several times and have not identified any potential sources that we could regulate, Mr. Johnson denied having called our office in the past, and 'seemed to become agitated' when it was suggested that he contact the police, as the odor could be coming from an illicit drug manufacturing operation. Mr. Sims offered to contact local police and fire agencies to report the odor, but Mr. Johnson expressed that he did not want police coming to his property and told him not to refer the concern.

On May 17, 2021, SLRO received an anonymous concern forwarded from Environmental Emergency Response, alleging that an anhydrous ammonia odor was being released onto the property at 8926 Berkay Ave (Mr. Jonson's property) from an unknown source. SLRO referred the concern to St. Louis County APCP. Jeremy Rogus, Supervisor of St. Louis APCP, responded that they have investigated this concern thoroughly over the years and have found no validity to the concern. Additionally, he told us that the resident should be considered dangerous. He said that the police consider him dangerous and advised us not to go to the property to investigate, even with a police escort. Later on, we learned that Mr. Johnson recently visited St. Louis County offices without prior appointment and was told that no one was available to take or address his concern. Mr. Johnson refused to leave the office and was police involvement was necessary. Staff at St. Louis County have been instructed to kindly, politely, and tactfully end the conversations when he calls. (see SharePoint for full report)

SLRO	10/27/2022	10/26/2022	John Engler	Franklin	Open Burning	RA		
------	------------	------------	-------------	----------	--------------	----	--	--

**Concern No.** 51627    **Concern Info** Ms. Crystal Klumpp called in to report her neighbor, John Engler, was burning toxic smelling waste when she is outside her house. He has done it the past two days and the smell is infiltrating her house. She does not know what he is burning as she there is a fence between them. She has taken videos of black smoke coming from the fire.

**Comments** ?10/27/22 - Robert Andrews - I called Ms. Klumpp and confirmed the address of the RP and told her I would be out the the site next week.  
11/2/2022 - Robert Andrews - Visited the RP and there was no one home at the residence. Did not see or smell signs of open burning from the driveway. ?11/3/22 - Robert Andrews - I called Ms. Klumpp and spoke to her about my visit. I told her I would be sending a letter with a fact sheet to the RP.

--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51621    **Concern Info** DNR Online concern form: "The person who owns this property does not live on the premises. He comes out once or twice a month and does nothing but burn. He has now starting piling up building materials from other locations. These materials continue to keep piling up and are visible from the main road. I believe he is now bringing in materials/scrap/etc from other locations and now burning them on the property. He burns all hours, day and night and all the way up to the edges of his property lines. Neighbors are getting concerned with the dry weather, smoke and illegal dumping and burning operations that are going on within the property."

**Comments** 10/27/22 - Robert Andrews - Looked up the site on Franklin County Assessor site and got owner's name and address.

11/2/22 - Robert Andrews - Went to the site to investigate the concern. I did not see construction waste being stockpiled or signs of open burning. The driveway was fenced off, but I was able to see a good portion of the property from the road.

11/7/22 - A letter and fact sheet was mailed to the property owner.

**Comments** ?I drove all through the neighborhood on 11/1/22 around 11:00 AM. I did not observe any noticeable odors at any point, and did not see any potential sources of fire/odors. There are no industrial facilities around this residence. I e-mailed the concerned party that day to ask if the odor was still ongoing and where it may have come from. As of 11/4/22 I have not received a response.

**Concern No.** 51625    **Concern Info** E-mail sent to St. Louis County APCP: "Hello. I'd like to report an ongoing air quality issue Klemm and Fulsome. My child goes to City Garden Montessori School and regularly pickup and drop off. There is a overwhelming smell of chemicals. This has been occurring on a regular basis since the beginning of the school year in August. I am very concerned about the air quality for the children and people who live in this community. Happy to answer any questions if you would like to call me and discuss.

Kindly  
Nicky Ridgeway  
816 509 7283"

**Comments** ?I drove through the area twice, on 11/2/22 around 8:30 AM and again on 11/3/22 around 3:00 PM. Both times, I did not notice any significant odor along the south side of the facility on Folsom Ave. However, there was a noticeable bathroom cleaner/disinfectant/urinal cake odor along the north side of the facility, on Park Ave. The odor was strongest near the parking lot of JD Street & Co. The odor was not strong enough to be noticeable at a 7:1 dilution factor through the nasal ranger. I called the concerned party and explained that while I did notice an odor, it was not strong enough to warrant a violation. I told her that I would continue to monitor the area, and that she could let me know when the odor was particularly strong and I could try again.

?On 11/4/22, I spoke with Bryan Willert, VP of Willert Home Products. I explained that we received a concern. He said that they have been around for many years without any significant changes, and that they never received complaints because they were in an industrial park. However, they just built the school about a year ago. He said the odor is likely from their urinal cake stamping process. The fragrances/chemicals they receive have an incredibly low odor threshold which make them suitable for bathrooms. They take precautions to limit the amount of odors released but there is only so much they can do. Most of the odors are vented through their exhaust fans, and they have a carbon filter. However many of the odors leak out of windows, doors, etc. and in certain conditions (low air pressure, low winds) these odors can 'roll' downhill since they are very heavy. I explained that I did not find a violation but would continue to monitor the area and keep him updated on what I find. He told me he would speak with his plant managers and make sure all necessary precautions are being taken to limit odor releases.

**Concern No.** 51626    **Concern Info** Online concern form: "Please describe your concern, including the location on the property.  
I live at 4349 Gertrude and I've been smelling an odor that smells like either burning plastic or rubber. It's a chemical type smell. I've been smelling it since about 6:00 pm on 11/2/2022z

Please provide driving directions from the nearest town and road intersection to the location of the activity causing concern.  
Major intersections near me is Gravois and Bates"

**Comments** ?I drove through the area of concern on 11/2/22, around 3:30 pm. I drove down the street that the concerned party is located on, and through the major intersections. I did not observe any unusual odors during my investigation. I did not see any facilities that would be producing an odor as described. There are several auto body shops in the area which may have caused an odor, but I did not find anything unusual at the time of the investigation.

On 11/3/22, I e-mailed the concerned party to let them know what I found. I asked if the odor was an ongoing issue and what they thought the source may be. As of 11/8/22, I have not heard back.

--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51865    **Concern Info** Online concern form: "There are concerns of properly demolishing homes that contain asbestos. There are homes that have already been demolished, and a few more scheduled soon and next one up is 142 St Louis Street, West Alton, MO. This home is close to residents and there are concerns on how to dispose of home with asbestos. Aware from licensed person there should be abatement set up for proper disposal. This can effect folks/children in future as it causes life long health effects. There has been no inspections. Using a track hoe to demo homes and taking somewhere to dispose of. Don't think county of jurisdiction is aware or if town has properly informed individuals making this known. This needs immediate attention. I will follow up with this concern. Thanks!"

**Comments** On 11/03/2022 I drove to 142 St. Louis, West Alton Illinois to investigate the asbestos complaint, This area was under flood and there are two condemned houses, these homes still standing and no demolition activities during my investigation. I called the City Hall, Ms. Janet Neustadt (City Board Member) informed me that these home were abandon by their owners, The City decided to demolish these home to prevent health hazard such as rodent, snakes, or misquotes?.

Fact sheets on regulated asbestos abatement and demolition requirements were sent to the city. No violations found as nothing has been demolished yet.

**Comments** 11/3/22 DBR - I e-mailed the concerned party asking if they were still experiencing the odor, where the odor may be coming from, and if there were times when the odor was typically the strongest. Will update Miranda if I hear back.

11/9/22 MSC - I drove to Scenic Meadows Court in St. Peters exiting off I-70 and driving with the windows down from Mexico Road onward. I drove around the neighborhood from 10:00am to 10:30am and noted no strong or offensive odors, nor any smells that were rancid or rotting. During my drive I noticed a City of St. Peters Trail behind the neighborhood, where there was a retention pond I decided to walk to the body of water to see if it was the source of the odor. I walked the trail around the neighborhood from 10:40am to 11:10am and did not smell any strong odors.

**Comments** I called the concern party on 12/7/22 to get more information about the odor and a full address. The CP told me that she was no longer noticing the odors, but they've been sporadic for the last couple years. She said it was a strange chemical smell that she couldn't place. I looked up the address and explained that we received a lot of odor concerns in the Benton Park/Soulard area, that are likely coming from across the river, but that she was a little further west of where they usually come from. However, with the right wind conditions they could definitely travel that far. I asked for her e-mail address and explained the monitoring that the EPA has been doing in the area. I told her I would add her contact information to a list and update her when I learned more about the monitoring, and the public meeting that the EPA plans on eventually holding. I also told her to contact me if she notices the odor again and we would do our best to get out there while they were still strong, since I didn't want to rule out a local facility.?

<b>Comments</b> on 12/7/22 DBR David Ruby e-mailed the concerned party and asked a series of questions that may help to narrow down where the odors could be coming from. Looked up the property on Google Maps. Area is mainly residential, did not see any obvious odor sources nearby.  On 12/12/2022 I (Lemma Zewdie) visited the location 8111 Peine lakes Drive in Wentzville MO 63385 ( where the odor complaint originated from). I noticed a detaintion pond next to the apartments where the caller resides and walked down there. There was no odor coming from there. This is a residential area and the only nearby business is a circle K gas station next to the apartment on the north side. Nothing odorous was coming from there at the time of my visit. I met the caller (Lisa Jackman) at here apartment (8111 Peine lakes Drive). I told here the reason for my visit. She told me there is no odor now.. I asked if she knows where the odor is coming from. She told she does not know. She told there is Ameri gas company on the east out road to HWY 61 about half a mile east. I drove to Ameri gas and walked around. I did not notice any odor in that area. I talked to 3 people near by the apartment where the caller resides. None experienced odor in the area. I notified my findings to the caller. She tanked me and said she will call us if need be in the future. I encouraged her to do so.

--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51941    **Concern Info** Lonnie Stonebraker called along with Sean Johnson of Marthasville Fire Department. Mr. Stonebraker is concerned about a neighboring property that routinely burns "toxic materials". There is a seven foot privacy fence surrounding the burn pit and they are unable to identify the material being burned. Mr. Stonebraker stated the smoke gives off a very strong odor which sticks inside his house for days. He is concerned with the health effects it may have on him and his customers. Marthasville FD does not have any relevant burn ordinances. Mr. Stormbraker stated the burn pit is approximately 25 ft from his house. Mr. Stonebraker stated the responsible party owns aggressive dogs and has a history with the Marthasville Police Department. Mr. Stonebraker is willing to meet with Department staff on his property.

**Comments** ??12/12/22 I spoke with Sean Johnson, assistant fire chief with the Marthasville Fire Dept. He asked what they could do in this scenario and I explained that the fire department could take photos, make statements, etc. that indicate a violation occurred, and we could issue a violation based on their account. He explained that an issue here is that the individual burning has a tall privacy fence around the property, so they're unable to see what is being burned. However it releases a foul odor and a large amount of dark smoke so he believes it is some kind of plastic/chemical. I explained that they can declare it a public health hazard, and that would be a violation. We agreed that the next time they burn, they will let us know about it, respond, and if the smoke is affecting the public then they will record that it is a public health hazard, and send me a copy of the incident report. We can then go ahead and issue a LOW and hopefully get this individual to stop burning.

12/13/22 I called the concerned party and explained my conversation with Fire Chief Johnson. I explained that he should continue to call the fire dept. when this individual is burning, and that now we had a solid plan of action in place to hopefully document a violation.

--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51388    **Concern Info** Online report indicates that Trinity Christian Academy is demolishing a building while school is in session and that no asbestos inspection has been conducted.

**Comments** SharePoint #3002 No violations -Prior to the investigation I checked Department asbestos records to see if any notified demolition actives were occurring in the area. The files indicated a nearby demolition project at 235 Myrtle Avenue that was scheduled for completion on October 16, 2022. I arrived on site to the area of concern located at 119 Myrtle Avenue in Hollister at 9:30 a.m. Upon arrival I noticed a large concrete pad where a building once stood, along with a back hoe and a truck belonging to the City of Hollister. No construction debris or roll off dumpsters were on site at this time. I then came in contact with Laura Brayden, a member on the executive board for Trinity Christian Academy. I introduced myself, provided credentials, and explained the reason for the visit. Brayden explained that the school recently sold that section of property to the City of Hollister for one dollar. I asked Brayden if she recalled an asbestos inspection being performed on the structure. Brayden confirmed that the City of Hollister did have an asbestos inspection prior to demolition but would need to reach out for the details. I then thanked Brayden for the time and made my way to City Hall.

After arriving at City Hall, I came in contact with Steve Booher, Permit Technician for the City of Hollister. I introduced myself, provided credentials, and explained the reason for the visit. Booher was able to confirm the City purchased the property from the school and had the building demolished. Booher clarified that after the purchase, the City established a new address for the property as 235 Myrtle Avenue, which matched demolition notification D11441. Booher then provided an asbestos report, lab analysis, and a demolition notification form. (A synopsis of these documents is below.) After review of these documents I found no violations, I then thanked Booher for the City's due diligence and knowledge of asbestos regulations and ended my investigation.

According to the asbestos report performed by Keith Mills (703412520MOIR7058), nine samples tested positive. Courtesy notification #C3944 indicates that all ACM was removed prior to demolition by Gerken Environmental using wet, non-mechanical removal methods. This ACM was disposed of at the Prairie View Landfill in Lamar by Barth Excavation. According to demolition notification D11441, the demolition contractor and waste transporter is Barth Excavations, all non-recoverable demolition waste was disposed of at the Taney County Transfer Station in Branson. ?

**Concern No.** 51416    **Concern Info** New subdivision is going in and they are not maintaining best management practices in dealing with dust leaving the property. Has been going on for about 2 weeks. Also burning vegetative waste, letting it burn and smolder overnight without supervision.

**Comments** SharePoint #3020

?On October 18, 2022 I arrived on site to the area of concern located between Berry Lane and N. Saratoga in Willard. Weather conditions at the time of investigation were clear skies with winds from the north at 14 MPH, a temperature of 44 degrees, and a relative humidity of 37%. I performed a cursory review of the area and did not observe any smoke or excessive fugitive dusts. Construction was occurring on the property above which included two back hoes, a bull dozer, and a watering truck. I observed the construction activities on site. While dust was being created it was not leaving the property nor could any accumulations be located. I then noticed an old burn pile at the back center of the property. This burn pile consisted of only vegetative wastes cleared on site and was over 200 yards from the nearest structure. I then made contact with Jesse Wethermon, the Foreman on site and employee of Kenny Singer Construction Company. I explained the reason for the visit and that no violations would be issued. Wethermon acknowledged they had been burning on site but is familiar with open burning regulations and knew about set back distances and what was allowed to be burned. Wethermon also brought up the watering truck and stated it was on the way back from being filled. Shortly after the water truck appeared on site and began watering down areas that could contribute to fugitive dusts. I thanked Wethermon for the due diligence and practicing best management techniques. I then ended my investigation and returned to the office.

**Concern No.** 51421    **Concern Info** INTERNET CONCERN: The caller reports the mayor in town has placed tires and paint buckets in an old house and started it on fire. Fire officials and law enforcement reportedly came to the scene and watched the fire. The mayor's and another house are close to the house on fire.

**Comments** SharePoint #3042 No violations

On October 19, 2022 I arrived to Stotts City at approximately 10:00 a.m. Since the town is rather small, I chose to do a cursory review of the area and noticed two burned buildings and several burn piles. One of the structures located near the intersection of E. Wright and N. Lockwood was the location mentioned in the concern. No one was on site during this time, but according to Lawrence County GIS' data, the landowner is Tim Blankenship, who also owns a home adjacent to the property of concern. I then made contact with the son of Blankenship and was informed that Blankenship was not at home. I left my business card and asked for a return call. While putting in an address for directions to another concern, I was approached on the street by Sarah Blankenship, the wife of Tim Blankenship. Blankenship mentioned seeing my vehicle on their security camera and was hoping to talk with me before I had left town. When asked about the origins of the fire, Blankenship stated that it started Saturday around midnight, both were asleep just next door when they were awoken by the local fire department responding to the fire. Blankenship mentioned the house was demolished on December 4th, 2021 and prior to the fire, they had been cleaning up some of the waste. Blankenship mentioned there had been several burned structures in the area and believes there may be an arsonist at work. I then asked for permission to enter the property and was granted access by Blankenship and was told Tim Blankenship would meet us there. The concern mentioned that the "mayor in town has placed tires and paint buckets in an old house and started it on fire". Upon inspection of the debris, I could find no evidence of burned tires or paint cans. In fact, approximately eight tires were stacked in the front yard, none were burned. Asbestos siding was identified and I recommended this siding be separated before taking it to a landfill. Due to the unintentional origins of the fire and the lack of evidence supporting the concerns claim, no violations were issued. I informed the Blankenship's that the remainder of the material on site would need to be properly disposed of at a landfill or transfer station. I thanked the Blankenship's for their time and ended my investigation. The source of concern is listed as "Jeremy Pene". As mentioned above, Sarah Blankenship mentioned the possibility of an arsonist and that it could possibly be Jeremy Tune. I could not determine in any way if this individual was involved but I recommended that Blankenship pass this information onto local law enforcement. ?

**Concern No.** 51309    **Concern Info** Anonymous concerned party called to report that Chris Daniel is burning potential trade waste on his property. The fires sometimes have a chemical smell, and sometimes have the smell of a house fire. Semi trailer loads of waste are being hauled in and dumped on Daniel's property and is reportedly burned 24/7 for the last few months. The burn piles can be seen from State Road E. A search of the Dade County Assessor's GIS site confirmed that Chris Daniel is the landowner of the 80 acre tract where burning is taking place. The concerned party did not have a phone number for Chris Daniel.

--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Comments** SharePoint #2914-On October 19, 2022 I arrived on site to the area of concern near the intersection of County Road 91 and State Highway E. I was able to observe smoke rising from a burn pile in a field off the north side of Highway E, this parcel can be identified as 08-04.0-17-000-000-09.00. Upon approach I saw several shipping pallets that were loaded and wrapped with plastic. Further behind these pallets was a large burn pile. I then drove further down the driveway in an attempt to make contact with a landowner. However, no one was on site at this time. I was able to observe this pile in greater detail and found contents to be large amounts of non-aerosol air fresheners and candy wrappers; a few tires were also noted. Most of the pallets mentioned above were loaded with non-aerosol air fresheners and candy. I then returned to the intersection and further reviewed Dade County GIS' data and determined an alternate address for the responsible party, Chris Daniel.

I then arrived at the home of Chris Daniel, I knocked on the front door but no one was home. I left my business card, fact sheet, and regulations on open burning. I then turned my attention to another property owned by Daniels. At this time an individual was unloading large cardboard boxes from a semi-truck that contained some of the same candy located on the other property. This individual turned out to be Zach Daniels, the son of Chris Daniels. I introduced myself and explained the reason for visiting. Z. Daniels explained the C. Daniels was not here at the time but was able to provide me his cell phone number. I then asked Z. Daniels if we could head over and take a better look at the burn pile. Z. Daniels deferred this request to C. Daniels as the landowner. I then placed two phone calls to C. Daniels but was unable to make contact. A voicemail was left.

Upon return to the office I received a phone call from C. Daniels and agreed to do a follow up investigation on Wednesday, October 26, 2022. This form will be updated after this investigation

On October 26, 2022, Matthew Knight and I arrived on site at approximately 10:00 a.m. and came in contact with the landowner Chris Daniel. Knight asked Daniel what was being done on the property. Daniel explained that he burns the plastic with his compost in order to create fertilizers and mentioned that the high cost of fertilizers drove him to make his own. Daniel was asked how he came to be in possession of the air fresheners and explained that they were given to them and often hand them out to local churches. Daniel was asked how long the material had been on site to which he stated approximately three weeks. Knight then explained solid waste laws and regulations to Daniel and explained that a RNOV would be issued based upon the findings today. Daniel was prepared for the clean-up as a roll off dumpster was already on site. Daniel stated they would begin clean-up activities that day and would keep all disposal receipts.

Upon further investigation of the property, I discovered that several tires (approximately 30) had been burned. This was in addition to the large burn pile of

air fresheners and compost that was currently smoldering. I returned to Daniel and explained that all illegal open burning must cease immediately and that an RNOV would be issued alongside the RNOV issued by Knight. Daniel acknowledged that all open burning would cease, the clean-up would begin immediately, and that all waste would be properly disposed of. Knight and I thanked Daniel for his time and ended our investigation. Violations. Air: 10 CSR 10-6.045, SW: 260.210?								
SWRO	10/21/2022	10/24/2022	Kerry Neville	Hollister Stone	Open Burning	TB		

**Concern No.** 51418    **Concern Info** Caller says a neighbor is burning mobile home contents and using tires to start the fires.

**Comments** SharePoint #3050 - I arrived to the area of concern at approximately 11:00 a.m., according to the concern the property of interest is "Next house south of 176 Dale Avenue, Hollister, MO". According to the description this would be 121 Dale Avenue. With information provided by the Taney County Assessor office, the landowner was determined to be Kerry Neville. A cursory review of the area did not yield any signs of open burning in terms of smoke or visible burn piles. However, in the backyard of 121 Dale Avenue I observed a bare frame to a mobile home.

I then came in contact with Kerry Neville. I introduced myself, provided credentials, and explained the reason for visiting. Neville acknowledged that burning has occurred on the property but it was mostly wood. I asked if we could take a look at the burn area and was granted access. Upon inspection of the burn area, I noted more than just wood, molten plastic and wiring were also found. Near this burn pile was a halfway demolished mobile home. Neville explained they have slowly been demolishing the home and have been separating materials so that he is only burning wood. I informed Neville that burning should be limited to that of untreated wood waste and household waste and that no materials from the mobile home are to be burned. Beyond that of a mobile home being burned, the concern mentioned tires. While several tires were seen on site, I found no evidence of burned tires during this investigation. I then informed Neville that a letter of warning would be issued for the burning of demolition wastes and left him with the fact sheet on open burning. I thanked Neville for his time and ended my investigation. Violation, 10 CSR 10-6.045?

**Concern No.** 51476    **Concern Info** Messiah Locomotive Services has a fire with black smoke going in their yard. Call came in during the burn.

**Comments** SharePoint #3097 -Prior to the investigation I reviewed Department files in regard to the location and entity and found no indication of a previous air investigation. On October 26, 2022 I arrived on site to 6495 Highway 160 in Galena where a building owned by Messiah Locomotives is located. No one was on site during this time, however, next door is the Highlandville Fire Department. I then came in contact with Kevin Cutbirth, Assistant Fire Chief. I introduced myself and asked if they had any reports of fire or had seen smoke from the property next door. Cutbirth said that they had no calls or seen any smoke and mentioned people are seldom on site. Cutbirth invited me to the back yard of the fire department where I was able to get a clear view of the property of concern, no evidence of open burning was found. Cutbirth then mentioned that the main facility for Messiah Locomotives is off Highway 160 in Spokane. I then visited the website for Messiah Locomotives and found an address of 11303 Highway 160, Spokane. I then drove to the area of Messiah Locomotives and was able to observe smoke rising from the back yard of the property. I then came in contact with Jeremy Erickson, introduced myself, provided credentials, and explained the reason for visiting. Erickson then granted permission to view the burn area. Upon inspection of this burn pile, evidence of four burned tires was observed. I explained to Erickson that tires are not to be burned and are to be disposed of properly. Erickson explained that he was unaware that tires could not be burned and was trying to clear junk off his property. I informed Erickson that he may cut the tires into three pieces and place them in his trash and the garbage company will accept them. I then explained to Erickson that a Letter of Warning would be issued for the burned tires and all illegal open burning must stop. I then explained the open burning regulations to Erickson and left the open burning fact sheet and regulations and ended my investigation. ?

**Concern No.** 51481    **Concern Info** My new neighbor has been burning tires, shingles, other rubbers, plastics, and general construction waste. I have asked him to stop, when he refused I called the sheriff's department and had the fire department out here on Sunday. He just restarts the fires after they leave. I have video taken from the road, not on his property of a pile that is covered in roofing shingles. I am having trouble emailing it as it is too big a file. I have two five year old boys and we are breathing these fumes.

Please help,

David Mays

**Comments** SharePoint #3112 - Open burning of demolition waste, including but not limited to, shingles, insulation, and tires was observed in a large pile located at the back end of the property. Jimmy Bowers, a property owner, stated that he will burn what he wants, when he wants, and no one will tell him what he can and cannot do. Bowers denied that he ignited the pile near the back of the property and stated he had only burned a pile of brush along with two tires. I informed Bowers that illegal open burning of regulated materials such as demolition waste and tires must stop immediately. Bowers then stated that he was told he was allowed to burn two tires per burn pile according to an employee of the USDA. I explained to Bowers that open burning laws and regulations fall under the jurisdiction of DNR and that no tires are allowed to be burned. Bowers then reiterated that he will do what he sees fit on his own property. After gathering photo evidence of the property, I left Bowers with the open burning fact sheet and regulations and ended my investigation. Due to the responses provided during the investigation by Bowers, I have opted to issue a Notice of Violation rather than a Letter of Warning. Please see the associated Notice of Violation and incident report by the Gravious Mills Fire Department for more details on this concern. ?Violation 10 CSR 10-6.045

However, a vacant lot located at 2721 South Timbercreek Avenue, had recently had several trees and stumps removed. Two piles of stumps were noted along with an approximately 12x12 burn area. This burn pile consisted only of vegetative wastes. This pile is also within 200 yards of a property not owned by the party conducting the burning and was also unsupervised as no one was on site during the time of investigation. I then gathered the appropriate fact sheets, regulations, and my business card, and placed them on a back hoe found on site.

I then reviewed Green County GIS's data and determined the land to be owned by TD Capital Investments, a contact address was provided at 304 W. Erie Street, Springfield 65807. A letter of warning will be sent to Capital Investments for the findings of the investigation.

Duplicate concern to #3158. Changes will be tracked under this concern #3158. ?Violation 10CSR 10-6.045

**Concern No.** 51574    **Concern Info** Recently a small FBO on the airport in Camdenton Missouri has started doing paint jobs on airplanes. During the paint jobs they chemically strip the airplanes using a peroxide based stripper. After the stripper has set on the aircraft, they bring the aircraft outside the hangar and pressure wash the plane and allow the run off to drain into the ground next to the aircraft hangar. They half sweep up the remaining paint chips and have an employee dump the paint debris on the north side of the hangar in the gravel.

**Comments** SharePoint #3177

?An investigation was conducted on November 3, 2022. As no hazardous waste determination had been made a hazardous waste inspection was conducted. Further information regarding this inspection is documented in a Letter of Warning issued as a result of this inspection. No runoff was observed at the time of the inspection. However, pressure washing activities were not being conducted. A small pile of paint debris, approximately 8-in in diameter was observed were indicated in the concern.

?LOW will be issued.

**Concern No.** 51581    **Concern Info** Not sure any updates on these plants around Verona. But the smell coming from them smells like anti freeze. When the smell is our essential is causing head aches and nausea in my house."

**Comments** SharePoint #3199-No violation. I called and spoke to the reporting party about the type of odor they were smelling. The specific odor they mentioned they referenced as being in town. I explained to them the process of getting down wind from each facility, in a position where they weren't getting background odors, and then calling the Department back to say which plant was producing the odor they were saying smelled like antifreeze. Based on experience with odors in the area, I am unaware which would smell like antifreeze, but BCP has a very distinct odor from choline production. At the time of the investigation, the wind was out of the south at 12 mph. I could not get to a location where I could separate BCP and Kemin Industries. There was odor north of Isonova on P highway by the Church, but it was not strong enough for a detection at 7:1 with the Nasal Ranger.

Conclusions

?No violation. Multiple odors from three industries, but none strong enough for a detection, or unable to isolate an odor from a specific plant.

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51690    **Concern Info** Fugitive dusts leaving property of an old lead mining area. CP believes that people are trespassing with ATVs and stirring up dusts in the area.

**Comments** SharePoint #3264-No violation. There was no dust leaving the property at the time of the investigation, and no activity on the property at the time of the investigation. The property goes back to Tri-State Investment Company, located at 7832 Granite Street, Tulsa, OK 74136. However, this is a single family residence that is unoccupied and for sale. I was able to find a company called Tri-State Investments (not company) in Hughes Springs, TX that sells land in TX, MO, and KS. However, the number given, 903-238-7934, says the mailbox is full. In doing a record search through the Missouri Secretary of State's Office, I found Tri State Investment Company was voluntarily dissolved. It does still list a registered agent as John Cook, 796 Waldo Road Seymour, MO. However, in doing a google search for Cook, there is an obituary listed.

I have suggested to the reporting party that she call the local police department and report trespassers, since there was no activity at the time of the investigation, and I have run out of ways to find the current land owner to inform them of people riding ATVs on their property and potentially creating dust.

#### Conclusions

?No violation. No dust leaving the property at time of investigation, and no activity on site at time of investigation.

**Concern No.** 51729    **Concern Info** Caller stated the odor from a nearby lagoon that accepts domestic waste has had a very strong, chemical odor the last three days. The caller is used to litter and land application odors, but this the odor has been very unusual the past few days. The caller wasn't certain where the lagoon was located, but thought it was maybe on Highway A in Fairview.

I reviewed Department files, and the location and odors seem to be consistent with the lagoon associated with Denali.

**Comments** SharePoint #3324

?No violation. There was odor leaving the property at the time of the investigation. This type of land applicaiton/storage is not regulated for odor because the company has a fertilizer exemption through Missouri Dept. of Agriculture. There was no material running off the property at time of investigation.

SWRO 11/22/2022 11/17/2022 William Dill

## Marshfield      Webster      Open Burning

TE

**Concern No.** 51730    **Concern Info** Open Burning. Non-household trash, burns 5-6 times a month and smell like plastic, dark smoke

**Comments** SharePoint #3325-No landowner was present at the time of investigation on November 22, 2022. A follow up investigation was mutually agreed upon on December 1, 2022. This form will be updated following this investigation.

On December 1, 2022 Matthew Knight and I arrived on site to 1519 Landslide Road at approximately 2:00 p.m. where we came in contact with William Dill, the landowner. Knight and I introduced ourselves, provided credentials, and explained the reason for visiting. During a phone conversation on November 22. 2022, Dill explained that he and his father go to local auctions and buy materials, bring them back to the property, and dispose of the waste by burning. Knight asked Dill to clarify the process that they usually take. Dill explained that they buy items at Joyce Auction house in Marshfield sort most of the materials on site and use the dumpster at the auction to dispose of most unwanted items. Dill further explained that a-lot of the items they purchase end up being donated to those in need. We then viewed the burn pile which had evidence of burned regulated items including durable goods, tires, and various petroleum containing materials. I then explained to Dill the open burning regulations and what would and would not be allowed. Dill acknowledged that he would cease all illegal open burning. Knight then went on to explain the solid waste regulations. Dill acknowledged that he understood these regulations and would be sure to abide by these from now on. We then thanked Dill and ended our investigation. ?

**Concern No.** 51731    **Concern Info** Strong constant odor out of the NE the smells like sewer (poo) smell. It was noticeable from WalMart at Rangeline to their residence at 11 Quail Ridge Drive.

**Comments** SharePoint #3354

?No violation. I did not pick up any odor with my nose along Rangeline from Walmart (20th Street) to Wildwood subdivision south of I-44.

SWRO	11/29/2022	11/28/2022	Franklin Masteller	Strafford Webster	Open Burning	TB
------	------------	------------	--------------------	-------------------	--------------	----

**Concern No.** 51769    **Concern Info** A private citizen called to report that the owners of the property are burning tires and other wastes. The property used to be a junkyard. This concern is being referred to the Department's Southwest Regional Office.

**Comments** SharePoint #3370-On November 29, 2022 I arrived on site to the area of concern and came in contact with the landowner Franklin Masteller. I introduced myself, provided credentials, and explained the reason for visiting. Masteller gave me a brief history of the property and stated that it was a former scrapyard that the previous owner neglected to maintain. Masteller then granted me permission to enter the property and inspect the burn piles. Upon inspection of these piles, evidence of burned regulated materials was observed. Those materials include but are not limited to approximately twenty tires, durable goods, paint buckets, car seats, mattresses, and fiberglass siding. I asked Masteller when they had started the fire and was told this past Sunday. I informed Masteller of the open burning regulations and that all illegal open burning must stop and all regulated materials will need to be disposed of at a landfill or transfer station. Masteller acknowledged that no further burning of regulated items will occur and that a roll of dumpster will be rented to dispose of the remaining materials. I instructed Masteller to retain all disposal receipts and submit them to my attention as soon as possible. I then thanked Masteller for his time and ended my investigation. ?

**Concern No.** 51772    **Concern Info** I observed release of pollution though 3 smoke stacks at IDF factory. This morning my phone app, Accuweather, stated there was an air quality hazard of 113 at 5:30 AM. Now it reads 106

**Comments** SharePoint #3377

?No violation. No visible emissions except for some slight steam from the boiler stacks. The facility has four boiler stacks, six chicken drying conveyors (with bag houses to control dust), and five dryers. The reporting party says they saw a release of emissions from three stacks. The only stacks that would produce dust are the conveyors, and they all have baghouses. It's possible that a bag house could have one of the bags inside it blow and cause a release of dust, but this wouldn't happen from three baghouses at the same time. The boiler stacks and dryers would only be producing heat, which would cause steam to form in cooler/colder temps. Left a message with the reporting party to get further clarification of which stacks she was referencing.

### Concerns Investigated Between

### October 16, 2022 and December 15, 2022

Note: "Concern Info" refers to the information provided to the department by the concerned party. The information seeks to accurately reflect the nature of the allegations it was made. Those statements of allegations do not necessarily reflect the legal

Region	Investigation Date	Date Received	Suspected Source Owner/Operator	City/County	Type of Concern	Inspector Initials	NOV	RNOV
--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51774    **Concern Info** The caller wanted to report the ongoing burning of asbestos, siding, lumber, and other refuse at the incident location. The responsible party is apparently clearing brush and other items by setting them on fire. Local fire has responded several times and extinguished the fires. This matter is being referred to the Department's Southwest Regional Office.

**Comments** SharePoint #3364

?Prior to the investigation I reviewed Greene County GIS' data and determined the land mentioned in the concern to be owned by I-44 development LLC. A search on MO Sec. of State website showed that I-44 Development is owned by a Cory Collins with a mailing address of 901 E. St Louis Springfield, MO 65806On December 1, 2022 I arrived on site to the area of conern located near the intersection of I-44 and State Highway B; the official address is listed as 587 State Highway B, Springfield. At this time an excavator was observed on site was separating recyclable materials from large piles of tress and vegetative wastes. I observed activities on site for approximately 10 minutes and then proceeded to make contact with the excavator operator, Allen Quintim. I introduced myself, provided credentials, and explained the reason for visiting. Quintim granted me permission to enter the property and further investigate the content of the burn piles. Most of the materials found on site were vegetative wastes and untreated wood from an old barn on site. However, the evidence of burn regulated materials could be found. Those materials include but are not limited to tires, mattresses, two cars, metal and plastic siding. The concern mentioned the possibility of asbestos containing materials being burned on site, however, I found no materials suspect of containing asbestos. While the pile has been burned recently, at the time of the investigation there were no smoke or flames. Upon closer inspection, several tires and carpet could be seen in the middle of the pile. I returned to Quintim to discuss my findings. I asked Quintim when the fire was started and was told sometime last week but has only been on site since Monday. I informed Quintim that evidence of illegal open burning was observed and that all regulated materials must be disposed of a landfill and cannot be burned. I stated that if burning is to occur on site it must be of vegetative wastes and untreated woods and meet a setback distance of 200 yards. Quintim acknowledged that he would remove all regulated materials from the piles and that only vegetative waste would be burned. All other items would be placed into a roll off dumpster, set to be on site early next week. I informed Quintim that a letter of Warning would be issued to Collins and eft the fact sheets and regulations related to open burning with Quintim; ending my investigation. ?

Concern No. 51790	Concern Info	Neighbor runs tree trimming service, fills trailers of tree debris and burns on personal property 2-3x per week near wet weather creek. Each pile is about 15ft around, pile as big as a trailer. Concerned party is a neighbor who has trouble breathing when the burns are going on and doesn't know if their neighbor has a permit to be conducting large burns. <a href="https://tracys-tree-service.business.site/">https://tracys-tree-service.business.site/</a>						

**Comments** SharePoint #3389

?On December 7, 2022 I arrived on site to the area of concern located at 4215 Casey Road, Forsyth, 65653. Prior to the site visit I performed a cursory review of the area and did not observe any signs of smoke leaving the property. However, I did observe a tree trimming truck unloading wood chips onto the property, this truck belonged to the White River Valley Electric Company. I then made contact with Tracy Standridge, owner of Tracy's Tree Service introduced myself, provided credentials, and explained the reason for visiting. Standridge then invite me onto the property to view the areas where he had been burning. When asked what was being burned Standridge stated that he had recently been clearing limbs and branches from his property and disposed of them by burning. I asked Standridge if he brings back any vegetative waste from job sites, Standridge stated that he does but only until his trailer is full and then the material is disposed of at Hansen's Tree Service. I asked Standridge if he burns any of the material from other jobsites, Standridge stated that he does not. Upon inspection of this burn pile, it contained mostly small branches and limbs that are not consistent with large commercial land clearing operations. Large tree that are stored on site are kept in separate piles away from where burning was conducted. Since the materials burned at this time originated on site, no air violations were issued. I then explained the open burning regulations associated with land clearing operations and left fact sheets on the subject as well. I then turned my attention to the large pile of wood chips that was on site. I asked Standridge the origins of the pile. Standridge stated that he allows business to dump the chips on his property so that he may use it for soil erosion and stability control and that he also donates it locals to cover walkways and trails. I asked Standridge if he was being paid to take the material, Standridge stated that no money is exchanged. Since no money has been exchanged and the material has an end use and is not being stored indefinitely, no solid waste violations were issued. On December 8, 2022, I briefly discussed my findings with the concerned party (CP). The CP stated that he has photographic evidence of Standridge unloading trailers from jobsites and then burning this material. I asked the CP if they would be able to forward these pictures to my email, to which they agreed. The CP stated they would submit additional concerns as needed. This form will be updated if the images are sent to my email. ?

**Concern No.** 51791    **Concern Info** Neighbor at address below is burning construction debris in backyard of residence. Smoke from fire is heavy and causing issues with caller. Caller notified the fire department but it is unknown what was said to the alleged violators.

**Comments** SharePoint #3388

?On December 1, 2022 I arrived on site to the area of concern at approximately 10:30 a.m. The alleged source of concern was listed as 2312 E. Allison Lane but upon investigation, no burn piles could be located on the property. I then placed a phone call to the concerned party (CP) to request more information. I was told that the address listed was wrong and was the house on the corner of Barrett Road and Horst Lane. I then referenced Greene County GIS data and determined the land to be owned by REDEC LLC with an address of 5782 N. Farm Road 171, Springfield. According to the Mo Sec. of State website, REDEC LLC is owned by Royce Redding and Jason Shaffer with a main contact address of 1655 S. Enterprise Suite A2, Springfield. I then made my way to the new area of concern and attempted to make contact with a landowner. The home is currently vacant and appears to be undergoing renovations as evident by the carpet padding observed on the front porch. No one was on site at the time of investigation, I left my card, and the fact sheets and regulations on open burning and ended my investigation. Since I was unable to observe a burn pile on this property no violations were issued at this time. I then left a voice mail to the CP and asked for them to keep an eye out and submit additional concerns if burning occurs again. A follow up investigation may occur pending the submittal of additional concerns. ?

**Concern No.** 51789    **Concern Info** trash and debris being dumped in the area. Trash is from a home at another location that was cleaned out and brought to the property by the person hired to clean out. Material was dumped and partially burned. Some of the trash has been spread onto the roadway.

**Comments** SharePoint #3393 - On arrival at the location described above, I found a small shed-type structure being used for a house. A pallet fence was constructed around the immediate property. A burn pile of brush was observed from county road 866, with a large pile of aluminum cans nearby. I did not see anything being burned illegally. A side building was being constructed on the site and scattered lumber could be seen. I knocked on the front door and was met by a white labrador. I left a business card asking for a callback. No violations were seen at the time of the investigation. The property consists of 2.1 acres.

**Concern No.** 51821    **Concern Info** Dust from the operation is leaving the site causing concerns along Highway 248 and when the wind blows from the southwest the dust has made it to the CP property in Branson Hills Estate.

**Comments** SharePoint #3396

?On December 7, 2022 I arrived on site to the area of concern near TRAC materials located at 3600 State Highway B, Branson, 65616. Weather conditions at the time of investigation were cloudy skies, winds from the SE at 3 MPH, a temperature of 46 degrees Fahrenheit, and a relative humidity of 98%. I then conducted a cursory review of the area and did not observe any fugitive dusts leaving the property. I then made my way to the parking area of the main concrete plant near the intersection of State Highway B and Branson's Hill Parkway. I observed activities on site and could only observe one activity generating dust on the property, which was from a brushing truck clearing haul roads of excess concrete. I then made my way to Branson's Hill Parkway to get an overview of the entire facility, I did not observe any dust migrating or accumulating beyond the property boundary of the facility. No violation issued at this time. ?

**Concern No.** 51825    **Concern Info** Strong paint smell in the area near the Loren Cook Company

**Comments** SharePoint #3399 - On December 2, 2022 I arrived on site to the area of concern located near the Loren Cook Company at 8:45 a.m. Weather conditions at the time of investigation were winds from the South at 18 MPH, a temperature of 47 degrees Fahrenheit, and a relative humidity of 56%. I positioned myself north of the facility near the intersection of Turner and Dale Street, at this time I did not detect any odors. I then traveled south, then west onto Dale Street and noticed an odor between the Loren Cook Company and Bristol Manufacturing. This odor did not resemble that of paint, as stated in the concern, but closer to that of wax and oil. I then left the area to clear my nose and vehicle of all odors and prepped the use of the nasal ranger. Before returning to the area, I traveled south of Bristol Manufacturing on E Florida Street and did not detect any odors. Therefore I determined Bristol to be the source of odors detected on Dale Street. At approximately 9:15 a.m. I returned to the area following odor regulation protocols and did not detect any odors at a 7:1 dilution threshold. Odors were only detected at a 4:1 threshold and therefore no violations were issued. I then ended the field portion of my investigation. Later that day I returned to the office and reviewed an operating permit issued to Bristol Manufacturing. According to the facility description, cheese barrels are cleaned using water and shot blast, then painted on site in booths and dried in ovens. After the cleaning process is complete the barrels are waxed and stored prior to shipment. Since the facility utilizes a wax coating, it explains the odors detected on E Dale Street. Regardless of the connection to the facility, no violations were issued at this time. ?

**Concern No.** 51826    **Concern Info** Caller stated a resident is bringing leaves and branches onto his property and burning. The resident has a landscaping company that is located at his property and has been burning the leaves on a daily basis for at least the last month. He typically starts burning around 4 or 5 pm and just lets the fires burn all night. This heavy smoke and ash affect the surrounding subdivisions and causes respiratory problems for several at-risk residents. Over a dozen residents are concerned about the smoke and fire. Some residents thought the house was on fire on multiple occasions.

The caller works for DNR Parks Dept and has been approached by several residents on a routine basis.

**Comments** SharePoint #3406

?On December 7, 2022 I arrived on site to the area of concern located at Scapes Lawncare and Maintenance at 2109 E. Warren Avenue, Ozark, 6572. I completed a cursory review and did not observe any smoke coming from the property. I attempted to make contact at the home located on the property, however, no one was home at the time. I then observed workers leaving the back area of the property, where the landscaping business is located. I made contact with Daren Rose, manager of Scapes Lawncare, I introduced myself, provided credentials, and explained the reason for visiting. Rose then invited me to the back area where burning has occurred. When asked about the origins of the material, Rose informed me that it was sticks, limbs, and leaves that have been cleared from the property. I asked Rose if any vegetative materials from jobsites were being burned on the property, Rose stated that materials from jobsites are disposed of at Hansen's Tree Service and that no materials from other jobsites are burned on the property. I then spoke with Rose about the burn regulations associated with commercial land clearing operations and left fact sheets on the subject as well. Since the contents of this burn pile consisted of vegetative wastes that originated on the property, no violations were issued. ?

**Concern No.** 51823    **Concern Info** Caller contacted the Governor's Office with concerns about Mailes Tree Services burning over 80 cubic feet of wood a week without an ACI, burning closer than 200 yards, and burning after dark. Art would like the inspector to investigate and take a measuring wheel to delineate exactly where the 200 yard mark is to the entity and to the CP (after the investigation). Also Art would like the investigator to speak with Dawn York after the investigation. Explain the open burning regulations, what we can enforce and if the facility is in violation of any of those regulations. Also encourage her to call us if she has concerns which will save time rather than contacting EPA or the Governor's office and then the information gets to us after they are done burning. We should send an update to Art after the investigation to let him know the results and the compliance assistance we provide to Ms. York.

--------	--------------------	---------------	---------------------------------	-------------	-----------------	--------------------	-----	------

**Concern No.** 51911    **Concern Info** Burning tires and aerosol cans, smoke crossing to JuJu's Snack Shack owner is Judy Arnall, she complained to the fire department about the burning tires and smoke. Fire department is across the Hwy 176 from the site

**Comments** SharePoint #3464

?On December 15, 2022 I arrived on site to the area of concern located near 4186 State Highway 176 at approximately 12:00 p.m. I then performed a cursory review of the area and was unable to observe any evidence of open burning. Prior to making contact with the RP, I asked a nearby citizen if they had observed any black smoke or smoke in general. The citizen pointed towards a property off the corner of Cox Drive and State Highway 176 and stated they had seen smoke coming from the property within the last month. A quick search of Taney County GIS data determined the landowner as Shaun Campbell, the same individual listed as the responsible party. I then drove south on Highway 176 and was able to observe a burn pile located in the driveway of the property the citizen identified. This property can be identified as Parcel ID: 08-1.0-11-001-032-043.000.I then made my way to Campbell Auto Sales located 4152 State Highway 176 (the address listed above and in concern #3464 is unrelated) and made contact with Shaun Campbell, landowner and owner of Campbell Auto Sales. I introduced myself, provided credentials, and explained the reason for visiting. I asked Campbell if he had been conducting any burning on the property. Campbell stated not on the business property but had recently purchased a plot of land across the street where burning has occurred. Campbell added that in efforts to clean the property he had paid a few locals to go through four mobile homes and were responsible for the burning. I explained to Campbell that he is liable for activities conducted on his property. Campbell also stated that he had hauled several loads of materials to the landfill and was able to provide receipts. Campbell and I then made our way across the street to observe what materials had been burned. Upon inspection of this property I was able to observe the illegal open burning of mattresses, car seats, fiberglass, and other durable goods. (Violation 1) Towards the back of the property was a dump the property had been utilizing for some time. This dump consisted of household wastes, durable goods, a fiberglass boat, and approximately 100 scrap tires. (Violation 2). I explained to Campbell that this is an illegal open dump and the material must be disposed of properly at a transfer station or landfill. I instructed Campbell to cease all illegal open burning and retain all waste disposal receipts and submit them to my attention. We then returned back to the business property where Campbell was able to provide waste disposal receipts from the property. I then provided Campbell the fact sheet and regulations to open burning and ended my investigation?

**Concern No.** 51910    **Concern Info** FROM INTERNET:

Reporting party stated someone has dug a trench and pushed a demolished mobile home in it and sat it on fire. The trench is still smoldering from this weekend. Another mobile home is on-site and a backhoe is currently digging a trench for the 2nd mobile home.

**Comments** SharePoint #3497

I arrived on site to the property of concern located off State Highway 215 just east of Tintown Township. This property can be identified as Parcel ID: 159031000000009030. No one was on site during the time of investigation, however the entirety of the property could be viewed from public access on Highway 215. Initial observations of the site included a demolished mobile home, a front loader, and a backhoe. The concern mentioned the possibility of this demolition waste being burned and buried on site. I was able to observe a shallow trench but could not verify the contents. I also noticed small puffs of smoke emerging from this trench, indicating burning had recently occurred. Since no one was on site, I left my business card along with the fact sheets and open burning regulations. After returning to the office, I received a voicemail from the property owner, Robert Brixey. I returned his call and Brixey informed me that they were not burying any materials but had burned 2x4's from the mobile home. I explained to Brixey that since this material is demolition waste, it cannot be burned and must be properly disposed of at a transfer station or landfill. Brixey acknowledged that no further burning would be conducted on the property and the remainder of the material would be properly disposed. ?
